

vtm::PicHeader::getRPL

```
graph LR; A[vtm::PicHeader::getRPL] --> B[vtm::PicHeader::getRPL0]; A --> C[vtm::PicHeader::getRPL1];
```

The diagram illustrates a function call `vtm::PicHeader::getRPL` which branches into two specific return values: `vtm::PicHeader::getRPL0` and `vtm::PicHeader::getRPL1`. The source function is highlighted in a grey box, while the target values are in white boxes. Blue arrows indicate the flow from the source to the targets.
