

conformance.run_test

conformance.run_tests

conformance.test_encode
_decode

```
graph LR; A[conformance.run_test] --> C[conformance.test_encode<br/>_decode]; B[conformance.run_tests] --> C;
```

The diagram illustrates a mapping from two separate test execution functions to a single test encoding/decoding module. On the left, there are two white rectangular boxes with black borders. The top box contains the text 'conformance.run_test' and the bottom box contains 'conformance.run_tests'. Two blue arrows originate from the right side of these boxes and point towards a single gray rectangular box on the right. This gray box contains the text 'conformance.test_encode' on the top line and '_decode' on the bottom line, indicating that both 'run_test' and 'run_tests' utilize the same underlying test encoding and decoding logic.
