

vtm::PU::applyImv

vtm::PU::getGeoMergeCandidates

vtm::PU::getInterMergeCandidates

```
graph LR; A[vtm::PU::applyImv] --> C[vtm::PU::getInterMergeCandidates]; B[vtm::PU::getGeoMergeCandidates] --> C;
```

The diagram illustrates a flow or dependency where two separate functions, `vtm::PU::applyImv` and `vtm::PU::getGeoMergeCandidates`, both serve as inputs to a single function, `vtm::PU::getInterMergeCandidates`. The boxes for the two input functions are positioned on the left, while the box for the output function is on the right. Two blue arrows originate from the right side of the left boxes and point towards the left side of the right box, indicating the direction of the flow.
