

vtm::QTBTPartitioner
::splitCurrArea

vtm::TUIntraSubPartitioner
::splitCurrArea

vtm::PartitionerImpl
::getMaxTuTiling

```
graph LR; A[vtm::QTBTPartitioner::splitCurrArea] --> C[vtm::PartitionerImpl::getMaxTuTiling]; B[vtm::TUIntraSubPartitioner::splitCurrArea] --> C;
```

The diagram illustrates two function calls on the left pointing to a single target function on the right. The top call is `vtm::QTBTPartitioner::splitCurrArea` and the bottom call is `vtm::TUIntraSubPartitioner::splitCurrArea`. Both point via blue arrows to the target function `vtm::PartitionerImpl::getMaxTuTiling`, which is highlighted in a gray box.
