

vtm::TComHash::generateBlock2x2
HashValue

vtm::TComHash::getBlockHash
Value

vtm::TComHash::getPixels
In1DCharArrayByBlock2x2

```
graph LR; A[vtm::TComHash::generateBlock2x2HashValue] --> C[vtm::TComHash::getPixelsIn1DCharArrayByBlock2x2]; B[vtm::TComHash::getBlockHashValue] --> C;
```

The diagram illustrates a dependency or relationship between three functions in the vtm::TComHash namespace. Two functions, generateBlock2x2HashValue and getBlockHashValue, are shown on the left, each with a blue arrow pointing to a third function, getPixelsIn1DCharArrayByBlock2x2, which is highlighted in a gray box on the right.
